

# Maestro

## Installation manual

The NaanDan Maestro achieves the best irrigation performance compared to sprinklers in the same category.

To ensure the Maestro's excellent performance and continuous operation, NaanDan's engineers recommend the following guidelines:

### For installation on Irristand:

- The Maestro should only be installed on a rod with a stabilizing ring, without an adaptor device.
- The upper edge of the 8 mm rod should always be clean of metal scrap.

### For installation on Amirit:

The Maestro should only be installed on a proper Amirit, with a 3/4 x 70 cm PVC riser.

### Subsurface installation:

- Risers should be no more than 70 cm above ground.

Implementing these recommendations and guidelines will ensure the optimum operation of the Maestro, while achieving improved irrigation results.
